# Jamf & BetterCloud Integration

With the shift to remote work, IT teams have an increased need to gain full control over employee devices and SaaS applications while ensuring employees can still seamlessly leverage the resources maximize their productivity.

Jamf is the leading Apple Enterprise Management platform that helps organizations connect, manage and protect Apple devices, apps and corporate resources while preserving the native and consistent Apple experience that people expect at work.

BetterCloud's SaaS Management Platform (SMP) enables IT teams to discover, manage, and secure their SaaS applications. Thousands of IT teams trust BetterCloud to help them centralize and automate their SaaS environments — enhancing visibility, increasing efficiency, and reducing security risk — as their build their SaaSOps practices.

Jamf and BetterCloud naturally complement each other, and many customers are leveraging these two critical platforms together.
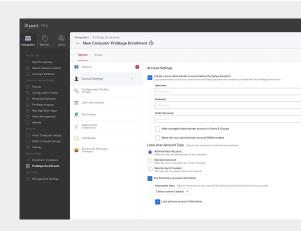

Together, Jamf & BetterCloud solve the critical challenges IT teams are facing...

Zero Touch Deployment

Centralized Control & Visibility

Enhanced Security

Complete & Secure Offboarding

Device & Inventory Reporting

Identity-Based Access

Device Security

App Discovery

User Lifecycle Management

Data Security
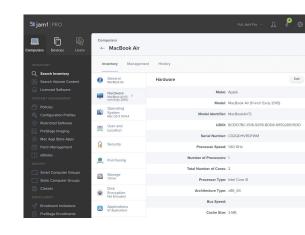

Zero Touch Deployment

With BetterCloud and Jamf, it will only take minutes for your new employees to be up and running on their devices and applications. Jamf allows you to create policies for zero touch deployment of mac devices, and BetterCloud ensures the applications are configured so that your employees have granular access to files, calendars, folders, channels, and more.

Centralized Control and Visibility

With Jamf, IT teams get visibility into all of their Apple device inventory information in a single platform. Jamf allows you to automate many of the manual steps required to manage and control the devices including.

BetterCloud gives you centralized visibility across all of your SaaS applications, so you can discover what applications your users are leveraging and ensure that automated alerts and workflows are in place to centrally manage and secure those apps with consistent policy

Enhanced Security

When BetterCloud is alerted to activities out of line with your security policies, our workflow engine can automatically lock a device via Jamf to ensure that the user's devices can't access apps and files that contain sensitive data.

WHEN   User Last Login > 30 days
IF   User Role is Executive
THEN   Lock User
